

Hi Coaches,

I attached an example match report to show the type of post-match analysis I can provide for a program. By understanding your team's data resources and needs I could help automate reports like this for post-match review, scouting prep, and opponent analysis.

I currently coach for a local high school team and created a *custom statistics dashboard* for the team based on play by play data to generate advanced metrics ***not found on Hudl***.

I did my undergrad at UMich in Data Science and Economics and spent several years working as a data engineer at Amazon. I love the responsibility and team aspect of volleyball and believe my stats and tech background can help the coaching team and this program.

I'd love the opportunity to work with your team. Please consider me for any video and analytics coordinator or related support roles.
